Why?

Age, sun diet and environment are a few of the factors that lead to skin deterioration on the face and other parts of the body. Now with DERMAGLOW™ particle skin exfoliation technology, there is a safe and gentle way to help rejuvenate, smooth and repair your skin. This form of microdermabrasion has been adopted as the treatment of choice by more than 1,000 European centers and has recently been introduced in the United States.

The DERMAGLOW™ particle skin exfoliation treatment is ideal for both men and women seeking to turn back the effects of time and desiring healthy, younger-looking skin. This treatment is for people who are unwilling or unable to undergo existing laser or chemical treatments, due to the high cost, potential side effects, discomfort and long recovery period.

How?

sometimes beauty is skin deep

DERMAGLOW™ delivers a controlled stream of microcrystals over the skin through a special hand piece. By gently polishing the skin and removing dead skin cells, oils and other buildup, it is possible to improve many skin conditions and imperfections that lead to premature aging.

The DERMAGLOW™ treatment takes 30 - 45 minutes depending upon the areas being treated.

DERMAGLOW™

FOR SMOOTHER, YOUNGER-LOOKING SKIN

Safe and Effective

The DERMAGLOW™ procedure has been proven safe and effective for the treatment of:

- Fine lines and wrinkles
- Sun-damaged skin
- Acne/Acne scars
- Excess oils
- Blackheads/Whiteheads
- Stretch marks
- Pore size
- Superficial age spots

A Treatment Program to Fit Your Needs

Most people see dramatic results after one DERMAGLOW™ treatment. However, for optimal results, your skin care professional may recommend a series of treatments and the time intervals between each treatment.

Post Treatment

Immediately following the DERMAGLOW™ treatment, residual microcrystals are brushed off and the area is cleansed and rinsed. A soothing moisturizing agent with sunscreen is applied, which helps protect the skin. A slight windburn sensation may be experienced. You can return to your daily activities immediately after treatment.
